

Please Donate Now to The North American CWD Project

Your donations are vital toward saving deer, elk, moose, caribou, and even great herds of reindeer throughout America – and for saving thousands of human lives.

For over a half century, chronic wasting disease (CWD) has been spreading across America – killing members of the deer family (deer, elk, moose, and caribou) at an ever-increasing rate without hope of saving these magnificent animals. Billions of dollars have been spent without the slightest success toward finding a cure.

However, things are about to change! Dr. Frank Bastian, a neuroscientist who is formerly from Tulane University, has discovered that CWD and related neurological diseases of humans are caused by a previously undiscovered species of bacteria. He has joined our North American CWD Project and with adequate funding we will soon be able to produce vaccines for these diseases. But we desperately need funding!

Without our upcoming vaccines, we will witness the continuing elimination of these magnificent animals from the American landscape. Within the decade, states such as Pennsylvania, Wisconsin, Michigan, Colorado, Wyoming, and others in over half of the United States and Provinces of Canada will see herds of these majestic animals collapse with billions-of-dollars of impacts to our economy and the loss of tens-of-thousands of jobs.

With our upcoming diagnostic test kits and human vaccines, we will be able to save an estimated 200,000 people each year from the risk of fatal brain diseases for which there is now no hope of curing.
